PROJECTS

Travel Booking Web Application

Dec - 2025

Built the frontend using React.js and Angular with a scalable, component-based architecture .

- Built interactive features like season-based suggestions, budget-friendly trip options, and destination filters Using reusable UI components.
- Integrated mock APIs and implemented smooth navigation, loading states, and error handling for an enhanced user experience.
- Created reusable UI components to maintain consistency across pages such as cards, filters, navigation bars, and modal popups.

Real Time Weather Web Application

July - 2025

Built a single-page application (SPA) using React.js to fetch and display real-time weather data.

- Integrated weather API (e.g., OpenWeatherMap) to retrieve current conditions, forecasts, temperature, and humidity for any location.
- Implemented responsive UI with reusable components such as SearchBar, WeatherCard, and ForecastPanel.
- Ensured smooth user experience with loading indicators, error handling, and clean data formatting.

Line Following Robot For Hospital Automation

Jan - 2025

Designed and built an autonomous robot to streamline hospital logistics by following predefined floor paths.

- Programmed the Arduino UNO using Arduino IDE to control movement and sensor input handling.
- Integrated IR sensors to detect and follow black line tracks accurately on the hospital floor.
- Used the L298N Motor Driver Module to manage dual motor control and directional movement.
